

Intraocular illumination

MAKING THE DIFFERENCE WITH TROCAR BASED CHANDELIER VITRECTOMY

NEW

One-step access to
bimanual surgery

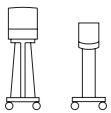

Flexible chandelier

Using chandelier illumination provides a true bimanual manipulation during vitreoretinal surgery. Our trocar based solution offers a one-step access for easy and quick connection.

There are many different surgical situations, in which chandelier illumination is beneficial for improving intraocular visibility and thereby achieving favourable surgical outcomes. It facilitates clear intraocular visualization and the surgeon can perform manipulations bimanually and efficiently.

Features and benefits for all Oertli chandeliers

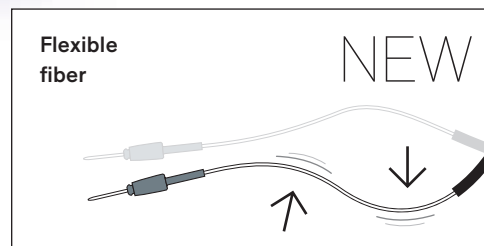

- One-step access with quick trocar based solution
- Accurate fixation due to reliable snap lock connection into all Oertli Caliburn trocars
- Extrawide and homogeneous illumination
- Postoperative tight sclerotomy
- Precise and comfortable magnetic connection to Oertli surgery platforms

Chandelier illuminator flexible,  ● 25 G
with Caliburn trocar, snap lock
for 23G and 25G
VV300155

Chandelier illuminator flexible,  ● 27 G
with Caliburn trocar, snap lock
for 23 G, 25 G, 27 G
VV300157

All articles are delivered sterile, single use, box of 10

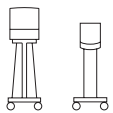

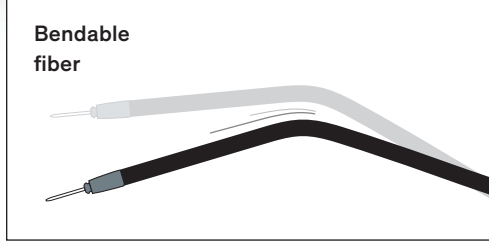

Features and Benefits

- Global visibility of the fundus for all surgical maneuvers
- High flexibility in illumination through flexible loop of fiber
- Compatible to all Oertli 23G, 25G and 27G trocars
